

Daily Work Log

OUR GITHUB!!!!: <https://github.com/jess-jpg/ics-culminating>

Date/Time	Things done	Things for next time
May 31 30 min	- brainstormed project ideas	- get food ordering system approved - begin writing written report
june 1 1h	wrote proposal report and submit	begin making food item classes
june 2 40 min	MenuItem super class	drink and meal classes
june 3 2h	snagged jessica into group !! WOO<3 drink class coffee class started meal class made menu on canva	plan
june 6 1h	created very basic uml (class outline) https://app.diagrams.net/#G18rTIPpeHJUq_RVOmMO7gzqXsrUhnVAj2 created BubbleTea class added constraints to "size" attribute in Drink class. input must be 's', 'm', or 'l'. if not, defaults to m. IT IS CASE-SENSITIVE! S != s	start / finish food classes q: is there functionality in the drinks / menu items or do the customers just buy them and move on with their day ? can they drink the drinks / eat the food or anything etc.
june 8 1h	created pasta class created pizza class	work on other food classes paying functionality ? maybe the shop can also keep track of how much it has in a till ? IDK prepare (???) for interview tmr!
june 9 1h	deleted hot attribute from MenuItem. hot now exists in Drink (and all subclasses of Drink) Started Main code to achieve functionality of being able to order something	jessica: add to the menu !! (pizza / bbt customizations) MOVE AWAY FROM HARD CODED STUFF. do file reading (in main method)! BE ABLE TO ORDER SMTH IN MAIN CODE
June 10 1h	Main code can order pasta	file reading -- be able to read from a text menu file to get the prices (that way prices can be modified and it won't affect the code)

june 14 1h	created menu text file (menu.txt) added constraints to BubbleTea	start (figuring out) file io ??
June 15 1h	MenuItem can now read from menu.txt to get prices and other classes were modified accordingly added pizza ordering to main method	finish and be able to read the price of any menu item
june 16	prepped for interview	(interview sprint 2) <ul style="list-style-type: none"> - edit what they already ordered - remove / cancel - ask: what would a customer want to be able to do when ordering? (add that or at least think about it) - search bar??????? seems very hard mm
june 18	cancel order (but it cancels the full order not just one specific item) bubble tea ordering now also in main method	add more menu items to be able to order, graphics
june 21	can display an image of the menu (just not yet implemented into the actual system)	FKSJDHFDH A LOT MORE BUT THERES NO MORE TIME

WHO CODED WHAT CLASS

sophia:

- MenuItem
- Drink
- Pasta
- Coffee
- main

jessica:

- MenuItem
- BubbleTea
- Pizza
- Main

INTERVIEW ONE NOTES

- change hard coded code to a text file
- add more functionality ?
- more back-end stuff ?
- inventory, fav customer

INTERVIEW TWO NOTES

- edit what they already ordered
- remove / cancel
- ask: what would a customer want to be able to do when ordering? (add that or at least think about it)
- search bar?????? seems very hard mm
